UP TO 60,000 HOURS OF USE.

The 8000 series ÜberLight task lights are the perfect choice when you require bright, natural light, in a compact and economical format.

Using 28 - 99% energy efficient LED bulbs, and a proprietary honeycomb lens cover that reduces glare from the light fixture, the 8000 is both friendly for the environment, and practical to use.

The flexible shaft allows you to position your ÜberLight to the correct position for your task, thus reducing eyestrain, and relieving your back from being in the wrong position.

Available in two models: table mount or with a c-clamp.
