

## Reliable Corporation Bows Latest Steam Mop

CHICAGO— Reliable Corporation is taking the wraps off a new generation of its Steamboy steam mop line, with the introduction of the new Steamboy T2, at the International Home + Housewares Show here.

The new unit functions as both a floor sweeper and steam cleaner, enabling users to clean loose debris from floors prior to washing. To operate, consumers simply push the button for sweeper function and then press the steam trigger to clean and sanitize. The T2 has an 8-inch cleaning path in sweeper mode and an 11-inch steam-cleaning path, enabling it to cover large flooring surfaces quickly. The unit delivers steam "in seconds," according to the company, and has a 3.3-cup water capacity, producing approximately 30 minutes of cleaning time. Steam temperature reaches 248° Fahrenheit or 120° Celsius, a key factor in delivering the kind of cleaning power consumers expect of steam cleaning. Other features include a 16-foot power cord with wrap-around storage, 180-degree swivel head for greater maneuverability and a replaceable water filter. The unit comes with two washable microfiber cleaning cloths.

The company is also executing the T2 in a new color palette, lime green, a shift in strategy from the more muted hues of its original steamers.

*Reliable's new T2 unit both sweeps and steams.*
